Railway map of People's Republic of China

Colored lines showing CRH and other high speed rail services

Last update: 2018-01-15

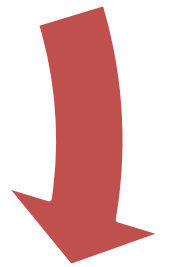

Problem Domain & Motivation

*Goal: Unified &
Easy travel
experience*

**Firewall
restrictions & gaps
in knowledge**

**Unreliable Google
Maps &
Scheduling**

**Inefficient travel
tools & resources**

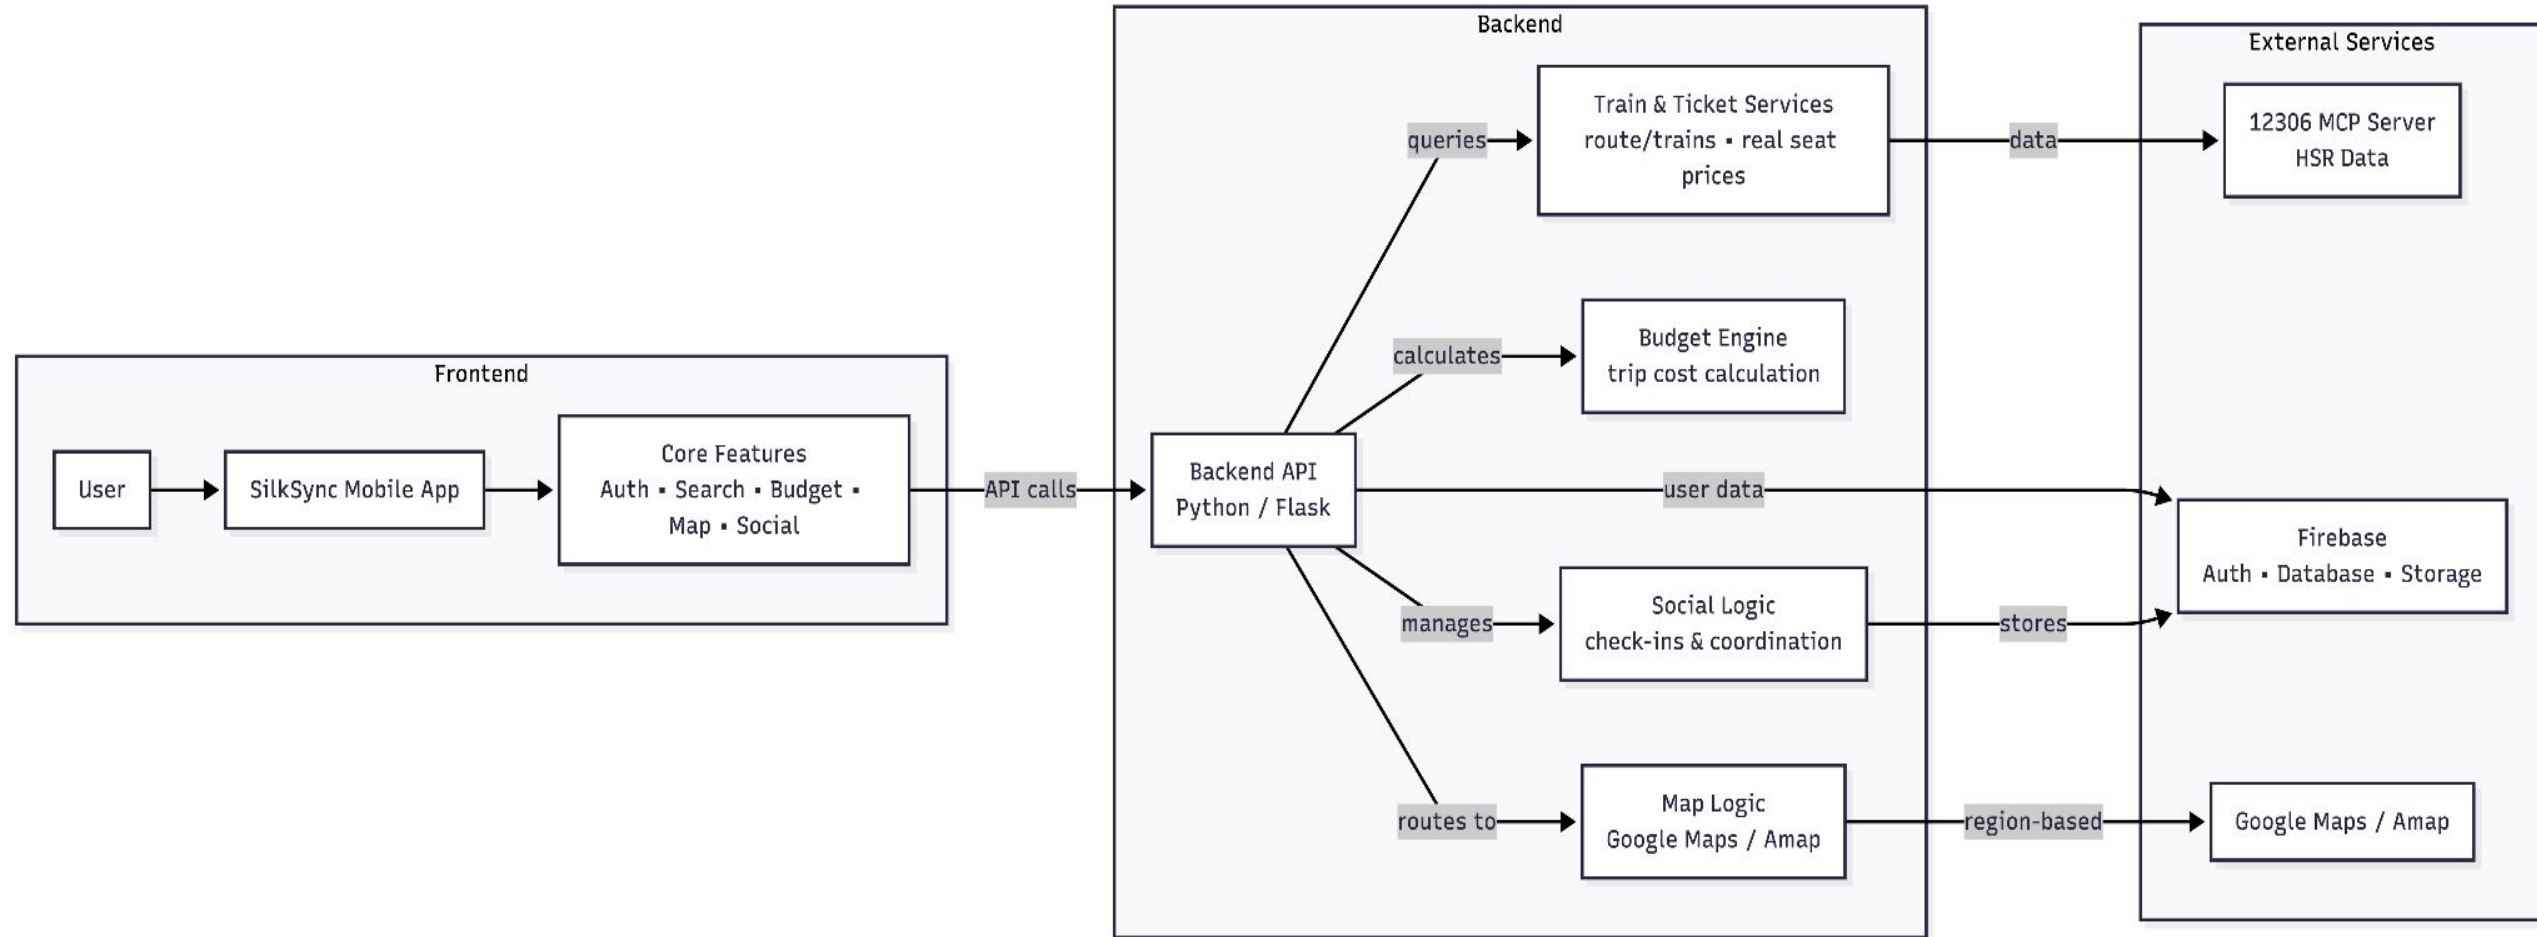

Goals set out and achieved

- User can authenticate and save train routes
- App automatically switches between Mapbox and Amap based on location.
- User can input a budget in USD and view converted CNY costs.
- User can view pricing for at least 5 major HSR routes.
- User can search for a train number and check-in.
- Users checked into the same train can join a basic chat room.

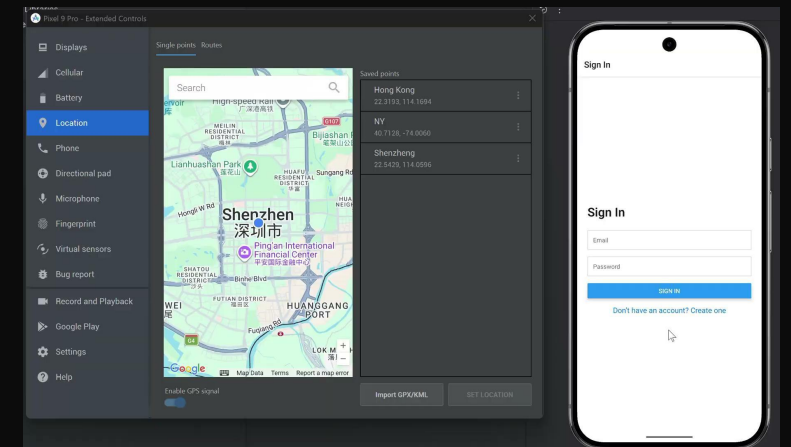

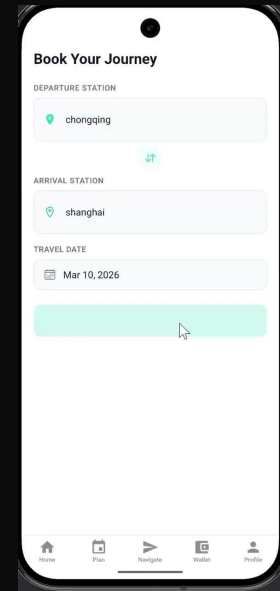

Architecture

Product Demo

- Placeholders for screenshots
- Login & Sign-Up UI
- Cost Breakdown interface
- Map transition: Mapbox → Amap

Scrum Process & Project Management

- Framework: 4-week Scrum cycles
- Tools: Jira, Discord
- Technique: Planning Poker (Account Core = 21 points)

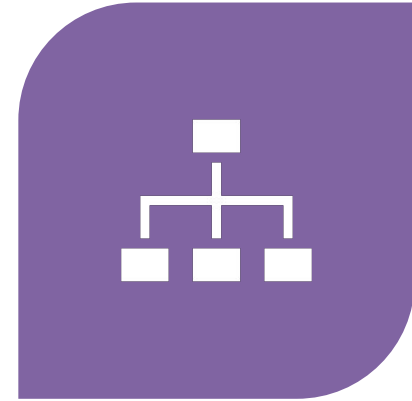

Challenges

**KNOWLEDGE GAP: SPRINT 2
PLANNED 49H, ACTUAL 35H**

**EXTERNAL RISKS: API CREDENTIAL
DELAYS**

**PO DECISIONS EXAMPLE: MOVE
OFFLINE MODE TO BACKLOG**

Lessons Learned & Team Growth 🌱🤝

Worked:

- Proactive communication
- Lab utilization

Did Not Worked:

- Independent work cycle
- No definition of done

Things would have done:

- Better Time management
- More frequent communication

Like:

- Working with new API
- Developing beneficial product

Dislike:

- Time stress/management
- Merge errors

Conclusion & Future Work 🌟🚀

**SUCCESS: DELIVERED A FUNCTIONAL,
UNIFIED TRAVEL PLATFORM**

**FUTURE: IMPLEMENT OFFLINE MODE,
REFINE HSR SEARCH FEATURES, ETC**

Thank You
